Assess / Teach / Rehabilitate

Better Care Home Health rehabilitation Orthopedic Program is a service specializing in the coordination and therapeutic management of pre and post surgical care of joint replacements. The program provides comprehensive physical therapy, occupational therapy and nursing according to the patient's physician's protocols.

The program may include pre-operation joint education, home exercises education, ambulation training and home environment safety assessment if requested by the physician. Post discharge from the hospital, the treatment program will involve one-on-one therapy in the patient's home to return range of motion, muscle specific strengthening, progressive mobility, wound care, monitoring of blood coagulation therapies and continual patient/family education.
